A NO. 1 CHIMNEY EXPERTS.

HOW TO PREVENT YOUR CHIMNEY FROM IGNITING

How to Prevent Back Draughts and Make Your Fires Burn. . .

AFTER sixty-five years of practical experience in renovating chimneys, ranges and furnaces, and bake ovens under all conditions, we guarantee that if our advice is followed and we have charge of your chimneys no flue will ignite, no matter what conditions may exist.

The flues in danger of igniting in private dwellings are the flues of fireplaces where wood is used altogether, the ventilating kitchen flues, the boiler range flues, and the kitchen range flues, should the steam and smoke from cooking enter the same flue. In Hotels and Restaurants the ventilating flues of the kitchen, the boiler range flues, and the bake oven flues.

Chimneys should be cleaned once a year, or as often as condition may require. Where chimney caps are used the soot accumulates twice as fast as where none are used. Our method of cleaning chimneys is the best adopted. We make no dirt on carpets or furniture. Our men are thoroughly trained. We have all the necessary service to insure a thorough and clean job and we are constantly adding to it.

You are often troubled with the wind blowing down your chimneys, which causes the smoke, coal gas, and soot to fall in the fireplaces, on the floors, in the rooms, and throughout the house. As chimney experts, we will make the draughts of your chimney absolutely perfect, or no charge. All chimney caps designed and made are not suitable for all conditions. But our Curve Cap complete—our own design and make—is the best in the United States and has never failed to make the draught perfect.

Tall buildings will always make the draughts of chimneys in buildings not as tall defective if next to them or near by, and it is in these instances where our Curve Caps have proven their superiority over all others made, and it is not necessary to run up cap as high as the tall buildings to make the draughts perfect and the fires burn in the fireplaces, etc., because our cap, from two to five feet high, is sufficient. Again, very tall caps when standing alone and secured by wires will weaken any chimney, as the wind will cause them to sway slightly to and fro.

Should smoke from the chimneys of a small house blow into the windows of a tall building tall caps are necessary.

Cooking odors prevented from going through the house.

Ranges, furnaces, and chimneys repaired, setted, and built. Try us when others fail.

We make a specialty of private dwellings and hotels in city or country.
